

BUILD FAST WEB

# Manual work in, digital systems out.

Websites, business software, ERPs and AI automation for schools, colleges, clinics, fuel stations, hotels, traders and agencies.

# Three things I build

Most clients start with one and come back for the next.

01

## Websites & web apps

Marketing sites, landing pages for ads, e-commerce stores and customer portals — fast, search-ready and built to convert visitors into enquiries.

02

## Custom business software

ERPs and operations systems: school, college, clinic, fuel station, hotel, inventory, society, agency. Registers and Excel files replaced by one system.

03

## AI & automation

AI receptionist on your phone line, chatbots on your site, WhatsApp auto-replies, payment reminders and follow-up sequences that never forget.

20+

*Education · fuel retail · healthcare · field services · hospitality · retail & e-commerce · real estate · agencies*

# Systems already running

Delivered work — every one of these is live or in daily use.

|                                         |                          |                        |                             |
|-----------------------------------------|--------------------------|------------------------|-----------------------------|
| <b>Velammal Institute of Technology</b> | Online admission portal  | <b>PSR Petrol Pump</b> | Fuel station operations     |
| <b>Asian Pest Control</b>               | Field-service CRM + site | <b>Guppy's World</b>   | Store with online payments  |
| <b>AnthHands</b>                        | Store + workshop booking | <b>Royal Fins</b>      | E-commerce store            |
| <b>Lobes</b>                            | E-commerce platform      | <b>Snap Tales</b>      | Gifts store + event booking |
| <b>Sticky Moments</b>                   | Custom gift store        | <b>Tvoy Dom</b>        | Rental marketplace, Russia  |

The same team builds it, launches it, trains your staff and answers the phone afterwards — you deal with one person, not a ticket queue.

*Client names and systems as delivered. Screens in this deck are product views of these systems with sample data.*

# What I am actually replacing

Every project starts the same way — with the registers and the WhatsApp groups.

## HOW IT RUNS TODAY

- Registers, notebooks and paper files
- Twelve Excel sheets, none of them current
- Job instructions over WhatsApp groups
- Bills and receipts written by hand
- Payment follow-ups nobody remembers to make
- Missed calls that quietly become lost customers

## AFTER THE SYSTEM GOES LIVE

- One system your whole team logs into
- Live numbers — attendance, sales, dues, stock
- Work assigned, tracked and closed inside the system
- GST-ready invoices and receipts generated in seconds
- Reminders that go out automatically, every time
- Every call and enquiry answered in seconds, day or night

*Nothing is thrown away on day one — existing data is migrated in, and staff are trained on a call they can record.*

# 01

## Systems I build for your industry

Ten operations systems, already designed and proven. Yours is configured to how you actually work — not the other way round.

- School ERP
- College ERP
- Admission system
- Clinic & hospital management
- Petrol pump software
- Restaurant POS & digital menu
- Hotel & booking system
- Inventory, quotation & billing

# The ready-made systems

Each one is a working product — we configure and extend it for your business instead of starting from a blank page.

## School ERP

Admissions, attendance, fees, exams, timetable, parent portal

## College ERP

Departments, semesters, internal marks, hostel, placements

## Admission system

Online applications, documents, merit list, seat allotment

## Clinic & hospital

Appointments, patient records, billing, lab, pharmacy

## Petrol pump

Shifts, nozzle sales, tank stock, credit customers, salary

## Restaurant POS

Billing, KOT, QR menu, delivery, item-wise reports

## Hotel & booking

Live availability, bookings, check-in, folio billing

## Inventory & billing

Stock, batches, quotation to invoice, GST, receivables

## Society management

Maintenance billing, visitors, complaints, resident app

## Agency & projects

Leads, projects, milestones, invoices, payment tracking

*Not on this list? Slide 27 shows how any business system gets built from the same set of parts.*

# School ERP

For schools, matriculation & CBSE institutions and coaching centres.

- Admission enquiries, applications and follow-up
- Attendance by class, section and staff
- Fee demand, collection and auto-reminders
- Exams, mark entry, report cards and progress
- Timetable, substitutions, transport and hostel
- Parent portal with SMS and WhatsApp updates

## WHAT CHANGES FOR THE OWNER

The principal opens one screen and sees roll strength, today's attendance, fees collected and who owes money — as of this minute, not last month.

School ERP — principal's dashboard

# College ERP

For engineering, arts & science colleges and polytechnics.

- Departments, programmes and semesters
- Course registration and internal marks (CIA)
- Attendance shortage, condonation and approvals
- Fees, scholarships, hostel and transport
- Faculty workload, timetable and substitutions
- Placement drives, offers and NAAC reports

## WHAT CHANGES FOR THE OWNER

Six departments, 3,400 students, and every report the office has to file — generated from the same data the staff enter once.

College ERP — registrar's overview

# Admission system

A standalone portal when admissions are the bottleneck — with or without the full ERP.

- Public application form with document upload
- Application and admission fees paid online
- Admin review panel — verify, shortlist, reject
- Merit list, seat allotment and confirmation
- Automatic SMS, WhatsApp and email updates
- Follow-up queue for unpaid applications

## WHAT CHANGES FOR THE OWNER

Built for Velammal Institute of Technology — the first digital admission system in the institution's history. Paper collection and manual tracking gone entirely.

Admission system — admissions office panel

# Clinic & hospital management

For clinics, dental and dermatology practices, diagnostic centres and multi-doctor setups.

- Appointments, doctor schedules and live queue
- Patient records, case history and prescriptions
- Billing, receipts, packages and insurance
- Lab tests, reports and pharmacy stock
- Automatic visit and follow-up reminders
- Online booking page + AI receptionist

## WHAT CHANGES FOR THE OWNER

The front desk stops writing in a register, no-shows fall because reminders go out on their own, and any patient's history is one search away.

Clinic management — front desk view

# Petrol pump software

For fuel stations and bunk owners running one outlet or several.

- Shift management with meter readings
- Nozzle-wise fuel sales and cash reconciliation
- Tank stock, dip readings and purchase indents
- Credit customers, limits and outstanding ageing
- Staff attendance with salary auto-calculated
- Expenses, day book and monthly reports

## WHAT CHANGES FOR THE OWNER

Live at PSR Petrol Pump. Shift tallies, staff salary and monthly reports that used to take a day of notebook work now take seconds.

Petrol pump software — owner's dashboard

# Restaurant POS & digital menu

For restaurants, cafés, bakeries and cloud kitchens.

- Billing POS with KOT printing to the kitchen
- QR digital menu — guests order from the table
- Dine-in, takeaway and delivery in one screen
- Table map, split bills, UPI, card and cash
- Item-wise, hour-wise and staff-wise reports
- Ingredient inventory with low-stock alerts

## WHAT CHANGES FOR THE OWNER

Orders stop getting lost between the floor and the kitchen, tables turn faster, and the day's sales report is ready before you leave.

Restaurant POS — live floor

# Hotel & room booking system

For hotels, resorts, service apartments and banquet halls.

- Live room availability across every channel
- Booking engine on your site, no commission
- Check-in, check-out, folio and GST billing
- Housekeeping status and maintenance blocks
- Automatic confirmations and reminders
- Banquet and event enquiries too

## WHAT CHANGES FOR THE OWNER

A room sold at the desk disappears from your website instantly — double-booking stops being possible, and direct bookings cost you nothing in commission.

Hotel & booking system — front office

# Inventory, quotation & billing

For traders, distributors, manufacturers and dealers.

- Stock in and out with batch and expiry tracking
- Quotation to invoice in one click, GST ready
- Purchase orders and vendor ledger
- Customer ledger, credit limits and receivables
- Low-stock and payment-due alerts
- Multiple warehouses and role-based access

## WHAT CHANGES FOR THE OWNER

You always know what is in the godown, what is owed to you, and exactly who to chase today — without opening a single spreadsheet.

Inventory & billing — stock and receivables

# Apartment & society management

For apartments, gated communities, builders and associations.

- Maintenance billing and online collection
- Resident app — dues, receipts, notices
- Visitor and delivery management at the gate
- Complaint tracking with SLA and escalation
- Amenity booking for clubhouse and halls
- Vendor payments, expenses and audit trail

## WHAT CHANGES FOR THE OWNER

The committee can show every rupee collected and spent at the next meeting, and residents stop asking where the maintenance money went.

Society management — association dashboard

# Agency, project & payment tracking

For agencies, contractors, service companies and field teams.

- Lead and enquiry CRM with follow-up reminders
- Projects, tasks, sprints and timelines
- Team workload and time tracking
- Quotations, milestone invoices and payments
- Expenses and profitability per project
- Client portal — progress without calls

## WHAT CHANGES FOR THE OWNER

Every project's stage and every pending rupee on one screen. The same engine runs field-service jobs, technician checklists and service certificates.

Agency system — projects and payments

# 02

## Websites that bring the work in

A site is not a brochure. It is the first employee your customer meets — it should be fast, easy to find and always asking for the enquiry.

- Business & corporate websites
- Landing pages built for ad traffic
- E-commerce stores with payments
- Customer portals & web apps
- Technical SEO & Core Web Vitals
- Google Business & local SEO
- Meta and Google Ads campaigns
- Analytics and lead attribution

# Website & e-commerce development

Built to load in under two seconds and to turn traffic into enquiries.

- Business, corporate and service websites
- Landing pages engineered for ad campaigns
- E-commerce with payments and shipping
- Customer portals and web applications
- Technical SEO, schema and page speed
- Enquiry forms, WhatsApp handoff, chatbot

## WHAT CHANGES FOR THE OWNER

Failed payments get captured as leads instead of vanishing, and you can see which rupee of ad spend brought which enquiry.

Store & website admin — revenue, orders and traffic

# 03

## AI that answers, books and follows up

The work that happens after hours, on Sundays, and while you are already on another call — handled without adding staff.

- AI receptionist on your phone line
- Outbound AI calling campaigns
- Website & WhatsApp chatbots
- Online booking with payment
- Automatic payment reminders
- Follow-up sequences for cold leads
- Daily owner report on WhatsApp
- Workflow automation between tools

# AI receptionist

It answers your phone the way a trained front-desk person would — every time, at any hour.

- Answers every call — night, Sunday, festival day
- Speaks English, Tamil and Hindi
- Knows your services, timings and pricing
- Captures the caller's name, number and intent
- Books the slot straight into your calendar
- Hands over to a human the moment it should

## WHAT CHANGES FOR THE OWNER

29 of today's 86 calls came in after office hours. Every one was answered, and 23 appointments were booked without a single staff member picking up.

Call in progress — +91 98xxx 41207

Live transcript · 01:12

Caller: Hi, is this Dr. Mehta's clinic? I want to see the doctor tomorrow.

AI: Yes, this is Dr. Mehta's clinic. I can book that for you. Is this for a new consultation or a follow-up?

Caller: Follow-up. I came last month for a knee problem.

AI: Got it. Dr. Mehta has 11:20 AM and 4:40 PM free tomorrow. Which suits you better?

Caller: Evening one is fine.

AI: Booked — 4:40 PM tomorrow with Dr. Mehta. May I have your name for the record?

Caller: Suresh Kumar.

AI: Thank you, Suresh. You'll get a confirmation on WhatsApp in a moment. Anything else I can help with?

Caller: What's the consultation fee now?

AI: A follow-up within 90 days is ₹400. You can pay at the desk or on the link in your WhatsApp confirmation.

Caller: Perfect, thank you.

AI: Happy to help. See you tomorrow at 4:40 PM.

If the caller asks something outside its knowledge, the call is transferred to a human — with the conversation so far already summarised.

AI receptionist — live call and captured details

buildfastweb.in · hello@buildfastweb.in · +91 97895 02278

20

# How the AI receptionist works

Six steps, all of them automatic. Nothing changes about the number your customers already call.

## BUILT IN

*Typical setup time: 1–3 weeks, including training it on your business and testing it on real calls.*

# Outbound AI calling

The same voice, working the other direction — calling your list instead of waiting for it to call you.

## WHAT PEOPLE USE IT FOR

*You approve the script and the calling window. Numbers that ask not to be called again are removed automatically.*

# Website & WhatsApp chatbot

Trained on your business, answering while the visitor is still on the page.

- Trained on your services, pricing and FAQs
- Replies in about a second, day or night
- Answers roughly 8 in 10 questions without you
- Asks for the name and number naturally
- Emails you the lead and pings your WhatsApp
- Hands over to a human when it should

## WHAT CHANGES FOR THE OWNER

A visitor who would have closed the tab at 11pm becomes a named lead with a phone number and a scheduled callback.

Chatbot console — live chat and the lead it captured

# Online booking & appointments

Customers book and pay themselves — from the website, WhatsApp, Instagram or a phone call.

- Live slot calendar on your own booking page
- Advance or full payment collected at booking
- Staff, service and duration-wise availability
- Confirmation on WhatsApp, email and calendar
- Reminders 24 hours and 2 hours before
- Review request and rebooking link afterwards

## WHAT CHANGES FOR THE OWNER

62% of bookings come in after the office closes, and no-shows drop from around 19% to 4% once reminders run on their own.

Booking system — calendar, payments and reminders

# Automations that run without you

Small pieces of work that quietly cost you money when a human has to remember them.

## Instant lead response

Every enquiry from the site, ads or Instagram gets a reply within seconds — before your competitor answers.

## Payment & bill reminders

Outstanding amounts chased on a schedule over WhatsApp, SMS and voice, with a payment link attached.

## Follow-up sequences

Cold enquiries worked for weeks — day 1, day 3, day 7 — instead of being forgotten after one call.

## Daily owner report

Sales, collections, attendance and pending items delivered to your WhatsApp every evening.

## Document automation

Invoices, receipts, service certificates and report cards generated and sent, not typed.

## Tool-to-tool workflows

Your website, CRM, accounting, WhatsApp and Google Sheets kept in step without copy-paste.

*Most automations are live within one to three weeks and run on top of whatever system you already use.*

# 04

## Your business is not on the list?

Every system above is assembled from the same set of parts. That is why a new one takes weeks, not years — and why the price is fixed before we start.

- Tell me how the work flows today
- I map the manual steps worth killing
- You get a screen-by-screen blueprint
- And a fixed quote, before any code
- Clickable design you approve first
- Weekly builds you can watch
- Data migrated, staff trained
- Support you can reach on WhatsApp

# The parts every custom system is built from

Pick the ones your business needs — clinic, gym, school, factory, transport, real estate, salon, workshop, anything.

## Roles & logins

Owner, manager, staff and customer — each sees only what they should

## Live dashboard

The four or five numbers that tell you how today is going

## Masters & records

Customers, students, patients, vehicles, properties, items

## Billing & payments

Quotations, invoices, receipts, GST, UPI and payment links

## Inventory & assets

Stock, batches, expiry, serial numbers, service history

## Scheduling

Appointments, shifts, jobs, routes, rooms and slots

## Field & job cards

Work orders, checklists, photos and digital certificates

## Reports & exports

Daily, monthly, GST, statutory — in the format you already file

## Notifications

WhatsApp, SMS and email triggered by what happens in the system

## Mobile app

Android and iOS for customers or field staff, one shared backend

*Platform or SaaS product idea? The same parts, plus multi-tenant accounts, subscriptions and an admin console.*

# Mobile apps & interface design

Two things that decide whether your team actually uses what you paid for.

## Mobile app development

Android and iOS from one codebase — customer apps, staff and field apps with offline support, ordering, booking and delivery flows, push notifications, and Play Store / App Store publishing. One backend shared with your web dashboard.

## UI/UX design

Product and dashboard interfaces, clickable prototypes before a line of code is written, a brand kit of colours, type and components, and a handoff any future developer can read. Staff stop asking "where do I click?" on day two.

## Design you approve first

You click through the real flow on screen and change your mind while changes are still free — not after the build.

## Training that sticks

Your team is trained on a recorded call, with handover documents, so a new joiner next year is not stuck.

*Typical timelines: UI/UX 1–3 weeks · mobile app 4–10 weeks · both quoted as a fixed price.*

# How we work together

Six steps from the first call to a system your staff are trained on. No hourly billing, no surprises halfway.

## DAY 1

### Discovery call

30 minutes on how your business actually runs today — the registers, the WhatsApp groups, the Excel sheets.

## DAY 2–4

### Blueprint & fixed quote

A written scope, a screen-by-screen plan and a fixed price. No "that's extra" once we start.

## WEEK 1

### Design you approve

Clickable screens before any code is written. You change your mind while changes are still free.

## WEEK 2+

### Build in weekly sprints

Every week a live link and a short video walkthrough. You watch it grow instead of waiting in the dark.

## GO-LIVE

### Launch & train the team

Existing data migrated, system live, staff trained on a call they can record. Handover documents included.

## ONGOING

### Support that answers

30 days of free post-launch support, then an optional care plan. You message a human on WhatsApp.

*Typical build times: website 2–4 weeks · ERP or custom software 4–8 weeks · AI and automation 1–3 weeks.*

# Three of the systems in detail

Delivered projects — what was broken, what was built, what changed.

## VELAMMAL INSTITUTE OF TECHNOLOGY

### Online admission portal

Every application was on paper, collected at the office and reviewed by hand — impossible to scale in peak season.

Public application portal with document upload and validation, plus an admin panel where the team reviews, filters and updates statuses. Works as a PWA on a phone.

- First digital admission system in the institution's history
- Paper collection and manual tracking eliminated
- Applications reviewed and updated in real time

## PSR PETROL PUMP

### Fuel station operations system

Shift records, fuel tallies, attendance, salary and expenses lived in notebooks and spreadsheets. No single place to see the day.

Shift management, daily sales and expenses, customer records, staff management with salary calculated from shift data, system logs and a full reports module.

- Shifts and fuel sales tracked in real time
- Staff salary calculated automatically from attendance
- Monthly reports in seconds instead of a day's work

## ASIAN PEST CONTROL

### Field-service CRM + landing page

Jobs assigned over WhatsApp, paper service certificates, handwritten invoices, no way to track technicians or payments.

Lead-capture landing page plus a CRM covering customers, enquiries, quotations, work orders, invoices, payments, technician checklists, certificates and reporting.

- Paper job tracking, billing and coordination replaced
- Service certificates generated and stored digitally
- Live dashboard for jobs, payments and staff

*Also delivered: e-commerce stores with Razorpay payments, a workshop booking platform, and a rental marketplace serving customers in Russia.*

# What you get, and what it is built on

The same standards on a one-page website and a full ERP.

## INCLUDED IN EVERY PROJECT

- Fixed price agreed before the build starts
- Clickable design approved before any code
- A live link and a video update every week
- Your existing data migrated in, not retyped
- Staff trained on a call they can record
- 30 days free support, then an optional care plan
- Full source code and accounts in your name
- Handover documents any future developer can read

## BUILT WITH

|           |                                                |
|-----------|------------------------------------------------|
| Frontend  | React · Next.js · Vite · Tailwind CSS          |
| Backend   | Node.js · TypeScript · REST APIs               |
| Database  | PostgreSQL · MongoDB · Supabase                |
| Mobile    | One codebase for Android and iOS               |
| Hosting   | AWS EC2 · Vercel · Nginx · daily backups       |
| Payments  | Razorpay · UPI · cards · payment links         |
| Messaging | WhatsApp Business API · SMS · email            |
| AI        | Voice agents, chatbots and workflow automation |

*Hosting, domain and payment gateway accounts are created in your name — you are never locked to me.*

BUILD FAST WEB

# Tell me how your business runs today.

A 30-minute call is enough for me to tell you what can be built, how long it takes and what it costs — as a fixed number, in writing.
